

StockWise

AI-powered inventory decision system for small F&B businesses.

Replacing daily guesswork with structured, data-driven decisions.

F&B operators walk a daily tightrope between lost revenue and cash burn.

The core problem is not tracking what inventory you have—it is deciding exactly what to reorder.
Existing tools demand endless data entry but offer zero strategic guidance.

Built explicitly for the realities of small-footprint food operations.

ENVIRONMENT

Small cafés, kiosks, and food stalls.

OPERATIONAL SCALE

Managing a highly volatile mix of 10-50 SKUs.

CURRENT WORKFLOW

Manual inventory counts, fragmented spreadsheets, and unstructured WhatsApp messages to suppliers.

THE UNMET NEED

A clear, instantaneous daily recommendation, not a bloated enterprise tracking system.

We isolate reliable math from AI interpretation to guarantee absolute trust.

Raw inventory data is converted into ranked daily actions.
The math makes the operational decision; the AI simply explains it.

Frictionless data intake meets operators in their existing workflows.

Unified Ranked Dashboard

Ranked Prioritization

Item A: HIGH RISK (85%)

Item B: MED RISK (50%)

Item C: LOW RISK (20%)

AI Decision Brief

• AI ANALYSIS: Urgent reorder recommended for Item A due to 'pending stock' and high risk associated with item 8 per Tenant fluctuation.

• AI Analysis: Optimal reorders recommended for Item A due to

Guided onboarding and highly flexible data entry ensure high compliance.
Raw data instantly populates a dashboard ranked by urgency and waste risk.

Multilayered fallback logic ensures unstructured text always becomes structured data.

Deterministic math dictates the decision, completely isolated from AI variability.

```
// Core Availability
```

```
days_of_cover = stock / usage
```

Quantifies exact runway

```
// Demand Calculation
```

```
lead time demand = usage x lead time x seasonal factor
```

```
stock gap = stock - demand
```

Establishes raw
purchasing need

```
// Risk Exposure
```

```
Inventory value = stock x price
```

```
waste cost = inventory_value - wasted
```

Calculates financial
vulnerability

Consistent, auditable, and strictly formulaic. Every recommendation is anchored in deterministic metrics. No AI guessing.

Complex variables instantly resolve into four clear daily actions.

Each SKU is individually scored and classified using immutable, fixed thresholds, guaranteeing operational reliability.

AI acts exclusively as a translator, never as the decision-maker.

WHAT AI DOES	WHAT AI DOES NOT DO
☐ Explain mathematical decisions in plain English.	☒ Decide restocking actions or purchase timing.
☒ Generate digestible daily summaries.	☒ Modify backend mathematical metrics.
☒ Interpret simulation testing results.	☐ Alter or guess inventory quantities.
☐ Extract initial text from unstructured supplier chats.	

Every recommendation is fully traceable via an open transparency stack.

Continuous tuning keeps ultimate control in the hands of the operator.

One-tap user validation ensures the system's strict parameters evolve safely alongside the changing realities of the business environment.

We embrace our technical constraints to guarantee absolute system reliability.

The heavy lifting of inventory math, translated into daily operational clarity.
